NORMAL

Machine Id
GENERATOR FILTER #2

Component
Filter
Fluid
{not provided} (--- GAL)

RECOMMENDATION

We recommend that you drain the filter from the component if this has not already been done. We recommend an early resample to monitor this condition. Diagnostician's Note: This filter contained some very large and chunky wear particles that indicate excessive 2-body abrasive wear. Several particles are welded steel and brass. Appears that this is a new generator breaking in, but the wear is excessive even for break-in condition.

WEAR PARTICLES

Wear particle analysis indicates that the ferrous sliding and nonferrous sliding particles are severe. Bearing wear is indicated. The filter contained no appreciable wear particles. All filter wear levels are normal.
