| Fuel content negligible. Elevated aluminum (Al) and/or lead (Pb) and<br>potassium (K) levels in your metals analysis are likely a result of solder<br>flux release into the lubricant and is common on new<br>equipment/components. There is no indication of any contamination in<br>the oil. | Fuel               | %        | ASTM D3524                 |           | 0.5         | <b>1</b> 0.8 | 25.9        |
