| Elevated aluminum (AI) and/or lead (Pb) and potassium (K) levels in your metals analysis are likely a result of solder flux release into the lubricant and is common on new equipment/components. There is no indication of any contamination in the oil. | Fuel             |          | WC Method   | >5        | <1.0        | <1.0        | <1.0        |
