## DIAGNOSIS

Inspect the reservoir for settled chips/fines, tramp oils, physical growth and remove them before there is an accumulation. Add a "severe" dose of BioTech 084, 3.3 ounces to the tank side reservoir in an area of high agitation. Follow up three days later with a "maintenance" dose, 0.8 ounces, to stabilize the microbial additive package. Circulate the coolant daily for proper aeration. (not applicable) Excessively high mold counts. The condition of the machining fluid is suitable for service.
