HP POLYMERS LTD 32 KERR CRESCENT PUSLINC, ON N0B 2J0 Canada Attn: Joan Polena Tel: (519)826-0374 E-Mail: jpolena@hppolymers.com	System Volume: 1000 ltr Bulk Operating Temp: 572F / 300C Heating Source: Blanket: Fluid: PETRO CANADA CALFLO AF Make: PHOENIX	Lab No: 02192815 Analyst: Adam Koscielak Sample Date: 01/12/18 Received Date: 01/16/18 Completed: 01/19/18 To discuss this report contact Adam Koscielak at 905-331-1323

Recommendation: Viscosity of the Calflo AF sample is slightly lower, and the flash point has been reduced slightly. Percentage of low boiling material, % <335°C is approaching the 2.5%. Recommend venting the expansion tank if possible, or replacing some of the Calflo AF in use with fresh product, to raise the flash point and reduce the level of lower boiling components in the system. All other parameters are normal, system is dry and contains a low level of solids. Fluid is suitable for continued use, and recommend another sample be taken after venting or replacement of some Calflo to see if the lower boiling material has been reduced, in 4 - months.

Comments: COC Flash Point is marginally low.
