Storm Resources Ltd. PO Box 1420, Stn M Calgary, AB T2P 2L6 Canada Attn: Travis Cameron Tel: (250)263-1263 E-Mail: travisc@stormresourcesltd.com	System Volume: 14000 ltr Bulk Operating Temp: 518F / 270C Heating Source: Blanket: Fluid: PETRO CANADA PETRO-THERM Make: ALCO	Lab No: 02265785 Analyst: Clinton Buhler Sample Date: 01/21/19 Received Date: 02/01/19 Completed: 02/20/19

Recommendation: Sample results indicate that the fluid is suitable for continued service. increased % boil-off now at 5.15. This likely indicates thermal degradation or could be related to high blanket gas pressure. Vent expansion tank to remove low boiling vapors from system. If blanket gas is required for proper circulation pump suction head, venting may have to be performed during an outage. Re-sample in 12 months after thorough venting of expansion tank.

Comments:

Elemental analysis results (above) in parts per million (ppm). [10,000 ppm = 1.0%]

Historical Comments

05/06/18	Sample results indicate that fluid is suitable for continued service. Please note the % boil-off below 335C: 2.82%. This can be an indication of thermal degradation while slightly increased 90% distillation value of 492C can be an indication of oxidation. As part of a robust thermal fluid maintenance program, perform regular venting of expansion tank to release the low boiling vapors. Ensure expansion tank blanket gas is operational after venting and set between 2-3 psi. Re-sample in 12 months. (GCD) 90% Distillation Point is marginally high.
01/14/17	(GCD) 90% Distillation Point is marginally low. TAN, Flashpoint and Viscosity all are within limits. Continue to operate and resample in 6 months. (GCD) 90% Distillation Point is marginally low.
