

[PEMBINA / LSD 8-13-63-5W6] PHASE #4 HEAT MEDIUM

Customer: PTRHTF20062

Pembina Gas Services

GRANDE PRAIRIE, AB T8V 7K2 Canada

Attn: Nicolas Brooks Tel: (403)874-8047

E-Mail: nbrooks@pembina.com

System Information

System Volume: 40000 ltr

Bulk Operating Temp: 500F / 260C

Heating Source:

Blanket:

Fluid: PETRO CANADA CALFLO AF

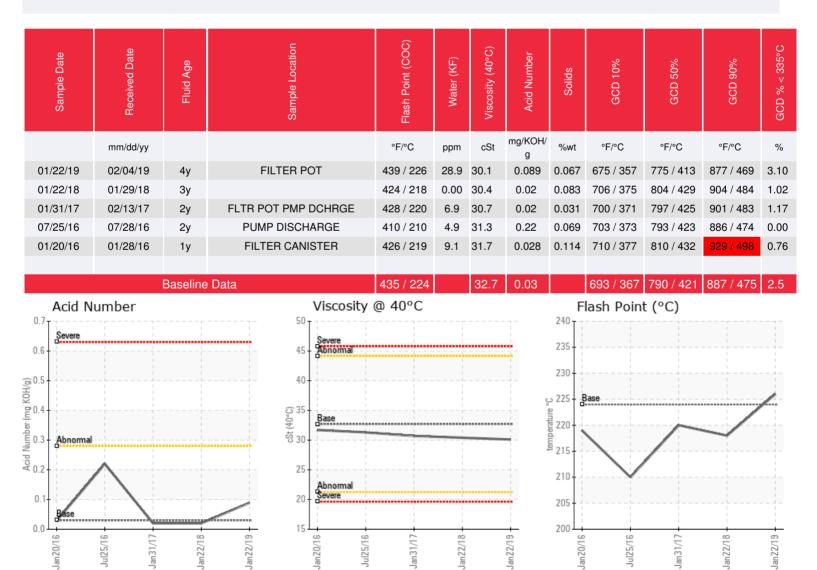

Make: HEATECH

Sample Information

Lab No: 02265961 Analyst: Clinton Buhler Sample Date: 01/22/19 Received Date: 02/04/19 Completed: 02/07/19

Recommendation: Sample results indicate that the fluid is suitable for continued service. Please note iron levels have increased from last year. This can be related to erosion or corrosion. The fluid's Acid number has increased since last year yet remains below alarm limits. Investigate source of iron. Please re-sample in 12 months

Comments: Iron ppm levels are abnormal.

	Sample Date	Iron	Chromium	Nickel	Aluminum	Copper	Lead	Tin	Cadmium	Silver	Vanadium	Silicon	Sodium	Potassium	Titanium	Molybdenum	Antimony	Manganese	Lithium	Boron	Magnesium	Calcium	Barium	Phosphorus	Zinc

	01/20/16	13	0	0	0	0	0	0	0	0	0	11	7	0	0	0	0	0	0	0	0	0	0	224	0
E	Baseline Data			0	0						0			0	0					0				270	

Elemental analysis results (above) in parts per million (ppm). [10,000 ppm = 1.0%]

Historical Comments								
01/22/18	Sample results indicate that the HT fluid is healthy and suitable for continued service. However, please note the level of iron (215 PPM) in the fluid. Further investigation into the source of iron should be considered as this is abnormal. Iron ppm levels are abnormal.							
01/31/17	Sample indicates that oil is in good condition and suitable for continued use. Resample in 6 months.							
07/25/16	The fluid is in good condition and suitable for further use. Please re-sample in 6 months.							
01/20/16	GCD is higher then normal indicating some heavier ends in the oil either from contamination or from thermal cracking. Continue to operate and resample in 6 months so a trend can be established. (GCD) 90% Distillation Point is severely high.
