

OIL ANALYSIS REPORT

Sample Rating Trend

NORMAL

Area {UNASSIGNED} Machine Id 413037

Component Diesel Engine

DIESEL ENGINE OIL SAE 30 (24 QTS)

DIAGNOSIS Recommendation

Resample at the next service interval to monitor. The fluid was not specified, however, a fluid match indicates that this fluid is (GENERIC) DIESEL ENGINE OIL SAE 30. Please confirm.

Wear

Metal levels are typical for a new component breaking in.

Contamination

Elevated aluminum (Al) and/or lead (Pb) and potassium (K) levels in your metals analysis are likely a result of solder flux release into the lubricant and is common on new equipment/components. There is no indication of any contamination in the oil.

Fluid Condition

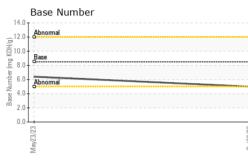

The BN result indicates that there is suitable alkalinity remaining in the oil. The condition of the oil is suitable for further service.
