

## **OIL ANALYSIS REPORT**

BD SHOP 200294

Component **Diesel Engine** 

**Fluid Condition** 

Elevated aluminum (Al) and/or lead (Pb) and potassium (K) levels in your metals analysis are likely a result of solder flux release into the lubricant and is common on new equipment/components. There is no indication of any contamination in the

The BN result indicates that there is suitable alkalinity remaining in the oil. The condition of the

oil is suitable for further service.
