Machine Id
E-COAT OVEN DRIVE
Component
Gearbox
Fluid
SHELL OMALA 150 (--- GAL)

DIAGNOSIS

Recommendation
We recommend that you drain the oil from the component if this has not already been done. Confirm the source of the lubricant being utilized for top-up/fill. We recommend an early resample to monitor this condition. NOTE: Please provide information regarding reservoir capacity, filter type and micron rating with next sample.

Wear
Wear particle analysis indicates that the ferrous rolling, ferrous rubbing and ferrous corrosive particles are abnormal.

Contaminants
There is no indication of any contamination in the oil.

Oil Condition
The AN level is above the recommended limit. Viscosity of sample indicates oil is within ISO 320 range, advise investigate. This plus the additive levels indicates that this is not the same brand, or type of oil as reported. The oil is no longer serviceable as a result of the abnormal and/or severe wear.
