Component
Chiller
Fluid
TRANE 0022 (--- GAL)

DIAGNOSIS

Recommendation
The acid number (AN) indicates that your fluid has reached the end of its useful life, please proceed with a complete oil change. Check for indications of excessive refrigerant charge such as bubbles present in the sight glass. We recommend an early resample to monitor this condition.

Wear
Iron ppm levels are abnormal. Oil pump wear is indicated. The zinc reading shows corrosion damage occurring on the zinc galvanized spray eliminator screen which is located above the evaporator tube bundle. The high metal levels indicate corrosion in the system.

Contamination
The water content is negligible. There is no indication of any contamination in the oil.

Fluid Condition
Acid Number (AN) is abnormally high. Zinc ppm levels are abnormally high. The AN level is above the recommended limit. The oil is no longer serviceable.
