PROBLEM SUMMARY

WINERGY GEARBOX WTG-802 (S/N 4834563-0020-2) Component

Wind Turbine Gearbox

FUCHS RENOLIN UNISYN CKC ISO 320 (340 LTR)

COMPONENT CONDITION SUMMARY

RECOMMENDATION

No corrective action is recommended at this time. Resample at the next service interval to monitor. Analytical Ferrography: Ferrous rubbing wear is mildly elevated from other samples in this series, but not enough to suggest any abnormal wear pattern is present. Contamination is minimal also, suggesting that the system appears to be operating normally. The low viscosity on the lubricant analysis is only slightly low, and the Iron value in the metals testing only just broke the initial alarm limit, so no corrective action is recommended on this system currently.

There are no recommended actions for this sample.

HISTORICAL DIAGNOSIS

Resample at the next service interval to monitor.All component wear rates are normal. Analytical ferrography: wear is normal with typical amounts of rubbing wear and a single sliding wear particle. The system cleanliness is acceptable for your target ISO 4406 cleanliness code. The water content is negligible. The system and fluid cleanliness is acceptable. Analytical ferrography: contamination is normal with typical amounts of contamination present. The AN level is acceptable for this fluid. The condition of the oil is suitable for further service.

Resample at the next service interval to monitor.All component wear rates are normal. The system cleanliness is acceptable for your target ISO 4406 cleanliness code. The water content is negligible. The system and fluid cleanliness is acceptable. The AN level is acceptable for this fluid. The condition of the oil is suitable for further service.

DIAGNOSIS

Recommendation

No corrective action is recommended at this time. Resample at the next service interval to monitor. Analytical Ferrography: Ferrous rubbing wear is mildly elevated from other samples in this series, but not enough to suggest any abnormal wear pattern is present. Contamination is minimal also, suggesting that the system appears to be operating normally. The low viscosity on the lubricant analysis is only slightly low, and the Iron value in the metals testing only just broke the initial alarm limit, so no corrective action is recommended on this system currently.

🔺 Wear

Gear wear is indicated.

Contaminants

There is no indication of any contamination in the oil. The amount and size of particulates present in the system are acceptable.

Oil Condition

The oil viscosity is lower than normal. The AN level is acceptable for this fluid.
