Change Filter	---	---	?	We recommend you service the filters on this component.

HISTORICAL DIAGNOSIS

24 Jan 2023 Diag: Jonathan Hester

WEAR

We advise that you check all areas where dirt can enter the system. We recommend that you drain the oil from the component if this has not already been done. We recommend an early resample to monitor this condition.The iron level is severe. The chromium level is severe. The lead level is severe. The copper level is severe. The tin level is abnormal. There is a moderate amount of particulates present in the oil. Elemental levels of silicon (Si) and aluminum (Al) indicate alumina-silicate (coarse dirt) ingress. The pH level of this fluid is within the acceptable limits. The oil is no longer serviceable as a result of the abnormal and/or severe wear. pH is 10.0.

ISO

We recommend you service the filters on this component. Resample at the next service interval to monitor.All component wear rates are normal. There is a high amount of particulates present in the oil. The pH level of this fluid is within the acceptable limits. pH is 9.00. The condition of the oil is suitable for further service.

WATER

We recommend you service the filters on this component. We recommend an early resample to monitor this condition.All component wear rates are normal. There is a high amount of particulates present in the oil. The water value is lower than typical. The oil viscosity is higher than normal. The AN level is acceptable for this fluid. The pH level of this fluid is within the acceptable limits.

DIAGNOSIS

Recommendation
We recommend you service the filters on this component. Resample at the next service interval to monitor.

Wear
All component wear rates are normal.

Contamination
There is a high amount of particulates present in the oil.

Fluid Condition
The pH level of this fluid is within the acceptable limits. pH is 10.00. The condition of the oil is suitable for further service.
