DIAGNOSIS

Recommendation

We advise that you check for possible coolant leak. We recommend an early resample to monitor this condition.

Wear

All component wear rates are normal.

Contamination

The high sodium (Na) level indicates the possible presence of salt water. Elemental level of sodium (Na) and/or boron (B) indicates a possible cooling water leak. Elemental level of silicon (Si) above normal indicating ingress of seal material.

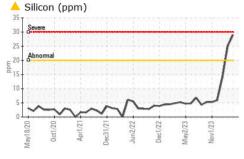

Fluid Condition

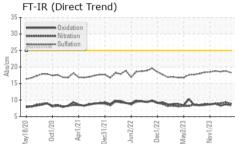

The BN result indicates that there is suitable alkalinity remaining in the oil.
