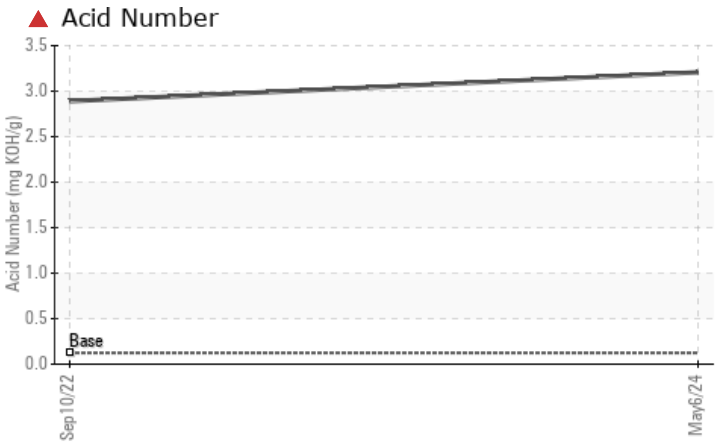
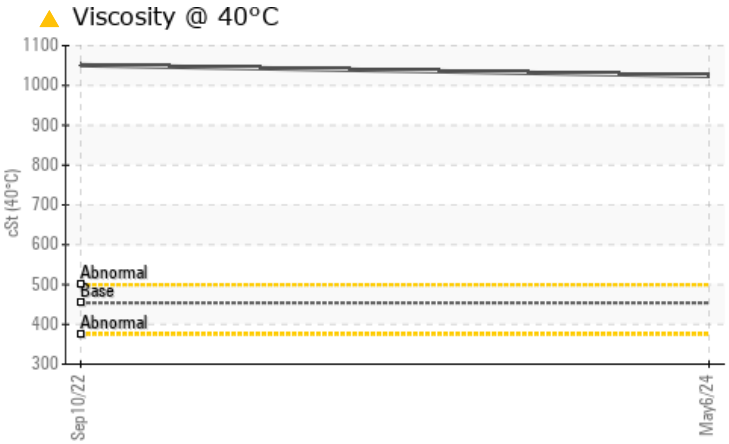
COMPONENT CONDITION SUMMARY





RECOMMENDATION

We advise that you check for a possible overheat condition. We recommend that you drain the oil from the component if this has not already been done. We recommend an early resample to monitor this condition.

HISTORICAL DIAGNOSIS

DEGRADATION

10 Sep 2022 Diag: Angela Borella

We advise that you check for a possible overheat condition. We recommend that you drain the oil from the component if this has not already been done. We recommend an early resample to monitor this condition.All component wear rates are normal. There is no indication of any contamination in the oil. The oil viscosity is higher than normal. The AN level is above the recommended limit. Confirm oil type. The oil is no longer serviceable.

DIAGNOSIS

▲ Recommendation
We advise that you check for a possible overheat condition. We recommend that you drain the oil from the component if this has not already been done. We recommend an early resample to monitor this condition.

Wear
All component wear rates are normal.

Contamination
There is no indication of any contamination in the oil.

▲ Fluid Condition
The oil viscosity is higher than normal. The AN level is above the recommended limit. Confirm oil type. The oil is no longer serviceable.
