DIAGNOSIS

Recommendation
We advise that you check for a possible overheat condition. Oil and filter change at the time of sampling has been noted. We recommend an early resample to monitor this condition.

Wear
All component wear rates are normal.

Contamination
There is no indication of any contamination in the oil.

Fluid Condition
The oil viscosity is higher than normal. The AN level is above the recommended limit. TAN level indicates possible presence of varnish. The oil is no longer serviceable.
