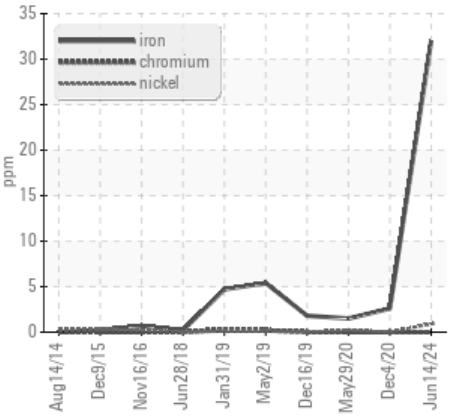
Ferrous Alloys



RECOMMENDATION

We advise that you check for a possible overheat condition. Recommend drain oil if not already done and flush with cleaner before refilling with oil. We recommend an early resample to monitor this condition.

PROBLEMATIC TEST RESULTS

Sample Status				SEVERE	ABNORMAL	ABNORMAL
Iron	ppm	ASTM D5185m	>50	▲ **32**	3	2
Acid Number (AN)	mg KOH/g	ASTM D8045		▲ **12.84**	▲ 1.354	▲ 2.09
Visc @ 40°C	cSt	ASTM D445		▲ **68.0**	49.0	46.2

RECOMMENDED ACTIONS

Action	Status	Date	Done By	Description
Change Fluid	---	---	?	Recommend drain oil if not already done and flush with cleaner before refilling with oil.
Flush System	---	---	?	Recommend drain oil if not already done and flush with cleaner before refilling with oil.
Resample	---	---	?	We recommend an early resample to monitor this condition.
Check For Overheating	---	---	?	We advise that you check for a possible overheat condition.

HISTORICAL DIAGNOSIS

DEGRADATION

04 Dec 2020 Diag: Don Baldridge
We recommend that you drain the oil from the component if this has not already been done. We recommend an early resample to monitor this condition.All component wear rates are normal. There is no indication of any contamination in the oil. The AN level is above the recommended limit. The oil is no longer serviceable.

view report

WATER

29 May 2020 Diag: Jonathan Hester
We recommend that you drain the oil from the component if this has not already been done. We recommend an early resample to monitor this condition.All component wear rates are normal. There is a moderate concentration of water present in the oil. The AN level is above the recommended limit. The oil is no longer serviceable.

view report

NORMAL

16 Dec 2019 Diag: Jonathan Hester
Resample at the next service interval to monitor.All component wear rates are normal. There is no indication of any contamination in the oil. The AN level is acceptable for this fluid. The condition of the oil is suitable for further service.

DIAGNOSIS

▲ Recommendation
We advise that you check for a possible overheat condition. Recommend drain oil if not already done and flush with cleaner before refilling with oil. We recommend an early resample to monitor this condition.

▲ Wear
The iron level is marginal.

Contamination
There is no indication of any contamination in the oil.

▲ Fluid Condition
The AN level is above the recommended limit. The oil viscosity is higher than normal. TAN level indicates possible presence of varnish.
